SUPPLEMENT

1. A complete set of the "Hawaii I" apparatus with all the instruments necessary for launching was sent from the Knorrbrömse Building, 9 Bahnhofstrasse, Berlin-Lichtenberg, to the Island of Greifswalder Oie, off Peenemünde, 12 September 1946.
2. This particular set is said to have included all the developments achieved by German technicians up to the end of the war.
3. The above island has in the past been used in connection with experiments on the launching of V-2's.

25X1A6a

Comment: The "Hawaii I" is a German-developed control mechanism for guided missiles. Not much information about it is available but it is probably unimportant as a device. Whether control is used for launching purposes or during flight is unknown.)
